how does cathodic protection work? Direct Current is forced to flow from an external source to the Structure.

When the flow of this current is so adjusted to over power corrosion current discharging from all anodic areas thereby providing complete Protection.

### Corrosion Control by Anodic Protection

General Principles in Corrosion Control If the brute force methods of corrosion control such as plastic, glass or other coatings are neglected, there are two basic methods of corrosion control available. One is to reduce The technique of cathodic protection is well known and has been widely applied to a number of corrosion problems. It is not so well

#### **Cathodic Protection Systems - Cathodic Marine**

Cathodic protection (CP) is a method of corrosion control that can be applied to buried and submerged metallic structures. It is normally used in conjunction with coatings and can be considered as a secondary corrosion control technique. The primary corrosion control method on any given structure is normally

#### **Cathodic protection - Wikipedia**

Pronunciation of the word "Cathodic". Cathodic protection (CP) is a technique used to control the corrosion of a metal surface by making it the cathode of an electrochemical cell. A simple method of protection connects the metal to be protected to a more easily corroded "sacrificial metal" to act as the anode.

#### **Cathwell: Basics principles of cathodic**

Basic principles of cathodic. Cathodic protection is a technique used to control the corrosion of a metal surface by making it the cathode of an electrochemical cell. The simplest method to apply cathodic protection is by connecting the metal to be protected with another more easily corroded metal to act as the anode.
